

CXT AMPLIFIERS

Street/Competition Series Amplifiers

The all-new TREO CXT amplifier series represents the pinnacle in development of competition-grade class-D subwoofer amplifiers. Be sure to bring firehose-size power cabling to keep these running at full tilt; the CXT4.1i features single 0 AWG power and ground terminals and the CXT6.1 is packing a pair of 0 AWG power and ground terminals. These amps are stable to one ohm when used solo, or a pair of amplifiers can be wired together to power two ohm loads. Both models feature massive extruded aluminum heatsinks for excellent thermal dissipation in street or competition applications.

Models Available

CXT4.1i

CXT6.1i
