# RSX BOX

The new TREO RSXBox delivers spine-tingling bass and understated cosmetics TREO Engineering is known for with more compact dimensions and a new lower price. The TREO RSXBox is built from precision CNC-machined robust  $\frac{3}{4}$  inch medium density fiberboard (MDF) to deliver tight panel fit and great strength. Dual spun aircraft aluminum ports tuned to 35 Hertz lend the enclosure a tight and aggressive sound and complement the premium-grade black automotive carpeting.

Every TREO RSXBox is loaded with two TREO RSX12.44 subwoofers. The speakers are pre-wired in parallel to present a one ohm load to the amplifier.\* The loaded enclosure is a perfect match to the TREO RSX1600, MSX1 or even the SSX400.1.

\*Subwoofers can be re-wired in series-parallel configuration to work with four ohm mono amplifiers such as the TREO RSX2200 or SSX100.2.

### FACTORY LOADED WITH TWO TREO ENGINEERING RSX12.44 SUBWOOFERS

**700W RMS POWER HANDLING**

**1 OHM LOAD WITHOUT REMOVING SPEAKER FROM THE ENCLOSURE**

**LUXURY GRADE CARPETING WITH DUAL 3 INCH ROUND ALUMINUM PORTS**

**$\frac{3}{4}$  INCH MDF CONSTRUCTION**

**WEDGE-STYLE DESIGN OPTIMIZED FOR TIGHT FIT BEHIND SEATS**

#### MEASUREMENTS

**35 INCHES WIDE (889MM)**

**14.5 INCHES TALL (368MM)**

**12 INCHES TOP DEPTH (305MM)**

**16 INCHES BOTTOM DEPTH (406MM)**
